Organization, naming
& ~~less~~ hierarchy
creation

- Detailed Entity mapping
- Dashboard building
- widget selection

Ranking

Channel Interface Design

- UI component that encodes required formats (Google box, image upload, SQL, etc)
- Target for data (service, name of ~~paylae~~ ^{timeliness, etc, account info} like IntelliJ)
- Framing info delivered to user (category, instructions, ~~more~~)

-
- Framing info & setup for a search
 - Help
 - Entity
 - Category
 - Channel

SERP

- w/d cloud (navigable)
- list (more like/less like/Top/weight) Machine labels
delete, ~~pin~~, etc) dismiss, but not approve.

Annotation

- Dismiss - source
- Category Edit - source
- Highlighting ← mouse over to see why (from keyword extractor, etc)
source
- lists of tagged items - source
- search out from to identify patterns of attribution - user
- Optional - ML asks "why did you do this?" - user
- "Jackpot" tagging. → goes to flag - source
- Ongoing user logging. - user
- ~~Stored~~ scripts that can be selected by ML
